

Color Enhancement

Hair color is a personal preference. The right color can enhance your best you. **Are you bold or understated?** Countless color options and imaginative techniques let you **express yourself on any budget.**

COLOR ENHANCEMENT

All-Over Color is the application of color from the scalp to the ends of the hair to improve your natural shade or to create an entirely new look. By creatively combining one or more hues, we can deliver a wide range of color options.

Base Break is used with or in between foil highlight appointments to brighten outgrowth. It saves time, money and reduces the frequency of repeated foiling thereby preserving the integrity of the hair.

Foil Highlights are a customizable technique that allow endless possibilities. From soft and natural, to vibrant and bold, foils are expertly placed throughout your hair to accentuate your hairstyle.

Ombre is a French word that means “shaded like a gradient.” As a fashion-forward color technique, artistically customized highlights are hand-painted, creating striking depth variation to complement the hairstyle shape and movement.

Lightening creates a stunning personalized shade of blonde to flatter your skin tone and suit your style. This all-over lightening method can use multiple tonal variations to create your perfect blonde.

Men's Camo is a gray hair camouflage color designed for men who want a natural blended effect that significantly reduces the amount of gray in minutes. Camo color gradually fades and is never brassy, eliminating that unattractive regrowth line that traditional hair color can leave behind.

POST-TREATMENT

Color Enhancement services are an investment in your image. To protect your investment, please consider these professional recommendations.

- Ideally, wait to shampoo hair 48 hours after a color service
- Use professional products with tepid water
- Lower the temperature setting when blow drying
- Use a thermal protective spray when using hot tools

Sun exposure, tanning beds, chlorinated pools, hot tubs, and saunas can lead to deterioration of your color service resulting in fading and dryness.

Weekly, deep-penetrating treatments are important to maintain the strength and moisture balance of your hair. Regular demineralizing treatments improve the performance of all color and texture services, particularly if you have a high iron or lime content in your water.

Independent studies have shown that professional products extend the life of both color and texture services.
