

# easiLengths AFTER CARE

After installation, a **two-week** **checkup is recommended** to ensure the taped extensions are secure, answer any questions, review home care, styling, and replace and/or adjust any troublesome extensions.

## *Cleansing and Conditioning*

- Wait 72 hours to shampoo or wet your extensions.
- If possible, shampoo less frequently, every other or every third day. A dry shampoo is a great shampoo alternative.
- Shampoo hair in a downward direction, avoid twisting or scrubbing your hair. Rinse out the shampoo thoroughly.
- Use conditioners, leave-in conditioners and smoothing serums on the mid shaft and ends only.
- Consult your stylist for shampoo, conditioner, and treatments best for use with your extensions and hair type.
- Gently squeeze hair with a towel to remove excess water, do not rub, or twist.
- While still wet, apply a leave in conditioner to ends to add additional moisture and allow you to detangle.

## *Styling*

- You are able to style your hair as usual being mindful to put minimal stress on your hair during styling and finishing.
- Thermal tools can be used on your extensions. However, it is recommended you use a thermal protectant and keep the styling tool on a medium temperature.
- Avoid using a curling or flat iron near or on the panels to prevent damaging them.
- Pinch the taped panels together when drying.
- Use brushes designed to work with extensions, Blow-dry to approximately 80% dry before round brushing in your style.
- Avoid using round brushes close to the root area; they may catch on the extension and pull them out.

## *Maintaining*

- Do not sleep on hair while wet. Tie the hair loosely in a ponytail or two low braids to prevent pulling, dreading and matting during sleep and exercising.
- Wet before and shampoo immediately after swimming in salt water or chlorine; both are the enemy of extensions.
- Brush the hair with the loop brush several times daily to prevent dreading and matting of extensions at the base.
- You may have your hair colored the same day of an installation (recommended) or 14 days following your extension installation.
- Full removal and reinstallation is recommended between 8 to 12 weeks.
- Use caution near items that could catch or tear out extensions such as seatbelts, swings, and doors.
